

Peace of mind all round – DEHN presents 360° protection solutions at Light + Building 2026

The megatrends of our time act as a catalyst for advancing global electrification: from the expansion of renewable energies and the modernisation of buildings to a growing demand for data centres, which require increasingly powerful infrastructure. Protection concepts that consider lightning and surge protection alongside occupational safety are essential for seamless operation. At Light + Building 2026 in Frankfurt, DEHN will present a 360° approach that combines holistic solutions in the form of consulting, planning, engineering services and bespoke analogue and digital products. From 8 to 13 March 2026, visitors to the exhibition can discover their ideal protection solution at booth B90 in hall 12.0.

Protect. Connect. Inspire. DEHN's credo at this year's Light + Building, the world's leading trade fair for lighting and building technology. The expert for lightning and surge protection and safety equipment has incorporated the **360° approach** into the concept of its exhibition stand, demonstrating how comprehensive protection concepts can be applied on an individual basis. Beside product highlights, engineering services and software solutions, the **TechTalks** staged directly at the booth offer visitors a variety of **short presentations, best practice insights and expert panel discussions** on the latest industry topics:

- New provisions in the **IEC 62305 / EN 62305 Edition 3** standard and practical solutions from DEHN for their implementation.
- The use of **AI and chatbots in electrical engineering**.

DEHN will also be showcasing product highlights such as the **DEHNventil ACI**, a pre-wired, compact combined arrester for maximum protection even without a backup fuse, which makes ACI (Advanced Circuit Interruption) technology available for the first time in the Type 1 arrester class. Another innovative solution is the DEHNguard MD, a further development in surge protection that combines safety with maximum flexibility during installation. The new double screw connection allows wiring of conductors of different types – both for stub wiring and feed-through wiring.

Also on display at the booth: simple solutions for the standard-compliant retrofitting of earthing systems in existing buildings, as well as **HVI light plus**, a high-voltage-resistant, insulated down-conductor system that requires no connection to the equipotential bonding.

The TechTalks offer industry insiders insights into the work of experts, network and surge protection for a smart world, and the protection of fire alarm systems.

Press release

For the first time, the company will also be presenting a **DEHN Workspace in the outdoor area of the trade fair (F11.A02)**, where visitors can test tools and products for themselves and deepen their practical knowledge of topics such as earthing and safety equipment.

One major highlight will be the **Lightning Protection Theme Day on 12 March 2026**, geared towards lightning protection installers, planning engineers and specialists. Trends, standards and efficient solutions will be explored in presentations, workshops and dialogue formats.

The interactive 360° world at the DEHN trade fair booth

DEHN's trade fair stand concept will also guide visitors through interactive stations where they can immerse themselves in product worlds and live demonstrations, including a virtual reality experience. The **meetDEHN** app is a central tool for planning your visit to the trade fair. It allows interested parties to book workshops and presentations by DEHN experts and create a personalised agenda. The app provides continual updates during and after the trade fair.

Further information can be found on the landing page for the trade fair.

About DEHN SE

DEHN is a leading, international family-owned electrical engineering company based in Neumarkt, Germany. With its comprehensive portfolio, DEHN addresses the megatrends of our time – from electric mobility and renewables to the protection of critical infrastructure. The company offers solutions and services for lightning and surge protection as well as safety equipment – fields in which, with more than 900 patents and utility models, DEHN is the innovation leader. The company's products protect people and buildings, systems and telecommunications technology, process industry, as well as photovoltaic systems and wind turbines.

With more than 2,500 employees worldwide, DEHN achieved revenue of around 465 million euros in the fiscal year 2024/2025. Alongside more than 115 years of experience, this constant growth is based on the highest quality standards and a consistent orientation towards customers and markets worldwide.
